

# REST API Calls while using Own Tracking Domain

For customers who, for example, use their own tracking domain or third-party cookies due to [ITP 2.x](#), the URI syntax can be adapted to call resources from the API.

To call the Webtrekk REST API, adapt the URI as follows:

- **Audience REST API**

```
http://{{OWN_TRACKING_DOMAIN}}/dmp/recos/v2
```

See [Using the API with your Own Tracking Domain](#)

- **Recommendation REST API**

```
http:{{OWN_TRACKING_DOMAIN}}/segments/v1
```

See [Using the API with your Own Tracking Domain](#).

Please note that in this case separate activation is required. Please contact your Webtrekk consultant for this purpose.
