

Using the API with your Own Tracking Domain

For customers who, for example, use their own tracking domain or third-party cookies due to [ITP 2.x](#), the API calls differ as follows.

Please note that in this case a separate activation is required. Please contact your Webtrekk consultant for this purpose.

In this chapter, you will learn how to execute API calls to get all the segments a specified user belongs to while using your own tracking domain.

URI Syntax

```
{server}/segments/v1/{accountId}/{placementId}?customerId={customerId}
```

Example

```
https://{{{OWN_TRACKING_DOMAIN}}}/segments/v1/1234567891234/23232323?  
customerId=04ee2ab263eeb5f0ca1139d7110f93c8
```

Query Parameters

Parameter	Type	Description
accountId	String	Mandatory. The trackId of the Marketing Automation account. How to get the account ID
placementId	Long	Mandatory. Placement ID (in the chapter Calling the API Information it is described how to find the desired placement ID).
customerId	String	Mandatory. This ID is used to identify the user for whom you want to retrieve information. Alternatively, you can use the ever ID. The customer ID must contain the same value that you use for the customer ID in your tracking.
